WELCOME TO THE FUTURE

Risc PC from Acorn offers all the traditional strengths of RISC processing, and a great deal more, **at a remarkably affordable price.**

- The world's most cost-effective, efficient 32-bit RISC computers
- Low-cost processor upgrade strategy, protecting your investment today and into the future
- RISC OS - a powerful, multi-tasking operating system, tried and tested by millions of users
- A wealth of powerful applications software from personal productivity tools to true multimedia
- Low cost access to DOS and Windows applications
- Lightning fast manipulation of still and moving images
- High performance multi-channel stereo sound as standard on all models
- Modular and upgradable computer systems that grow with your needs

Welcome to Risc PC from Acorn. The new generation of personal computing.

Acorn

WELCOME

It hardly seems like a year has passed since I welcomed you to the first Acorn World Show in 1993. Over the last year we have strengthened our position as the leading supplier of educational solutions, we have expanded our business into new areas, launched new products and developed new initiatives. As a consequence we have even more to show you this year.

Last year we gave experienced Acorn watchers a vision of the future, previewing the Risc PC technology in the Acorn Gallery. How many of you spotted the 24-bit graphics and enhanced real-time video animation which is now standard in the Risc PC?

This year our team of technical experts have brought together work from Acorn and Online Media to give a preview of just how we believe home entertainment and computers will integrate in the next few years. Innovation has always been one of Acorn's biggest strengths and at this year's event you can see once again our continued commitment to the technologies of the future.

With show sponsors *Acorn Computing* and *Acorn User*, this year's event is certainly the place to see the latest and best in what is being developed for Acorn platforms. Third-party partners have developed even more applications which work across the Acorn range exploiting the features of new products while, uniquely in the computing industry, retaining high levels of compatibility with the old.

Acorn World '94 has even more to offer, whether you are an experienced user or just starting out. Thank you for coming and enjoy the show.

Acorn computers –
what better recommendation
can there be when choosing
a system to help your child?

Now Acorn have worked closely with
leading experts on educational software
to design a pack especially for younger
children. 'Early Years' features a range
of programs that will help your child to
develop literacy, numeracy and
familiarity with computers at the same
time as having lots of fun!

'Early Years' contains:

- Acorn A3010 32-bit computer
with integral floppy disc drive
- 3-Button Mouse
- Talking StartWrite
– word-processor
- Explore with Flossy the Frog
- A Mouse in Holland
- Doris the Dotty dog
- Amazing Maths
- Gemini
- Paint Pot

BREAKING DO

The education demands and challenges faced by parents, teachers and children in the 1990s are unique and come on many fronts. Parents and teachers have always wanted to do the best by their children, but with the enormous amount of technology and advances which are being made year by year, which path should you take?

Beyond the battle of the systems

The situation today is very similar to that of the early days of the bicycle, when all sorts of weird and wonderful variations fired the imagination, only to be abandoned. Store cupboards throughout the country are littered with unused hardware – the casualties of the battle between systems. For many schools and parents the mutual incompatibility of computers can prove costly and frustrating. However, it is arguable that this is a natural and necessary part of the evolution of IT.

The 1990s was a turning point, with all the major computer manufacturers aiming to bridge or completely break down the barriers of mutual incompatibility. Acorn launched the multi-platform-capable Risc PC in 1994 and its abilities are further enhanced by the 486 PC card – seen for the first time at Acorn World '94. Not every parent or teacher is going to need PC access, but the knowledge that when you buy this machine you are covering future contingencies gives a security unheard of on any other platform at the price.

Acorn Computers' core business has historically been in the education market – from pre-school to higher education. However, it was the advent of the RISC OS machines with their 32-bit technology which redefined the landscape of educational computing.

Using a computer should be an enabling experience, breaking down the barriers to technology and learning in general. The flexibility and versatility of the Archimedes – and now the Risc PC – ranges are the key to making Information Technology a part of everyone's education, regardless of age, ability and requirements.

Balancing the budget

We all know that educational resources are finite causing problems with time, money, training and so on. At Acorn we believe it's our role as partners in education to address the problem of

Advantage

This programme comes in two parts: school and home. The purpose of this partnership is to bring together schools, teachers, pupils and families. Every time a school in the scheme buys an Acorn machine they will be awarded points which can be collected and used to acquire a range of educational equipment for science, music or sports, or books, training and further computer equipment.

In addition, teachers receive discounts on educational conferences, special reports on education, training offers and a copy of Arc magazine. On the home front, the scheme allows families to buy an Acorn computer and donate 500 points to a school of their choice.

limited resources head on.

To ease the strain, Acorn has introduced a variety of schemes for schools and parents to spread the cost of buying computer systems:

- Assist
- Advantage
- Options

At home

One of the most common reasons cited by parents for buying a computer is to help their children at school. A computer is a tool, and it is up to you how to use it. However, for many families it is probably one of the most expensive tools they will ever buy. Most want a machine which will grow with their children, well supported by other companies, with a built-in flexibility

which means that they won't have to buy a replacement in another two years.

An Acorn Risc PC or A3010 can be used to encourage basic computing skills as well as colour matching or painting in a range of programs aimed at the pre-school age group. On the same machine, an elder sibling or parent could be using Photo CDs and one of the image processing software packages available for the RISC OS machines for business or pleasure.

At school

We can't do much about giving teachers more time, although it's amazing how IT can keep pupils busy.

Where we can have a major impact is in training and in being realistic about school budgets.

Training and support for Acorn machines and software is available from the Acorn in Education Centres (AECs). You can phone 0223 254222 for details of your nearest centre or pick up your copy of the Acorn Selector. This is a directory of resources and training courses available throughout the UK.

Teachers can visit the Centres to try out computer systems, get an instant update on the latest IT in schools or view software and curriculum materials. The AECs also produce a range of resources relating to technology, whether you be a novice or advanced user of IT in the classroom.

However, the use of Acorn machines extends far beyond the classroom, into business, medicine, manufacturing and printing throughout the world. The reasons? There are many, but the most common are: speed, cost, flexibility, adaptability and a good learning curve.

Assist

Easing the financial burden, Acorn Assist gives low cost finance for individuals in education. With 0% finance you can spread the cost over six months with no cost penalty – 0%APR. Alternatively, you could buy any Acorn machine for £50 month – 13.75% APR.

As a bonus you'll be given Purchase Points towards a catalogue of gifts, as well as a free subscription to Arc magazine. Introduce a friend to the scheme and you could receive even more Purchase Points.

WN

Computers should
open up a world of
opportunities for children
at school, but also at home

the barriers

Old literacy versus new literacy

Glancing through the computer or educational press will reveal questions being raised about the emphasis on the computer as a teaching medium. IT enthusiasts often assume that there are only two types of people: other IT enthusiasts, sharing their convictions about the value of IT, and everyone else. However, the education arena has seen the development of a serious debate about the value of new technologies.

On one side there are the supporters of *Old Literacy*, with an emphasis on a back to basics approach returning to the blackboard and the 3Rs. It is arguable that such a formalised approach leaves no space for diversified learning, exploration and communication, but there is a solid weight of professional and parental opinion behind this approach.

Faced with this anti-technology prejudice, there's only one thing to be done: IT has to embrace the concerns of the traditionalists and build on the strengths of the 3Rs. No one is advocating the abolition of the 3Rs but there is no reason to ignore technological advances, and many reasons to embrace them. Children should be given the best of both worlds.

IT should be used to make the emphasis on traditional literacy more approachable – talking books, special non-confrontational teaching methods, extra help for learning difficulties. However, *New Literacy* continues the learning process by introducing children to a whole range of communications media: visual, aural, as well as text-based.

Acorn is the prime mover in this debate along with representatives from industry and education. There is a need for better communication between the business and teacher communities, and New Literacy skills enable children to apply and use interactive multimedia software in the workplace. Such skills are increasingly expected by employers throughout the job market.

The debate will continue while, on the ground, teachers and parents have to work with

reality. Every child is different, with their own individual needs and interests, and there is no reason why the debate should result in an either/or situation. The most logical route is for parents and teachers to take what is relevant and necessary from both sides, bearing in mind that the most important element in the equation is the child.

The missing link

Out of the classroom, what benefit can children get from using computers at home? Your first thoughts may turn to a desktop machine, but don't forget the impact made on education by palmtop technology, and in particular the Pocket Book.

In a recent research project the pupils from Richard Calloner Boys' School, Kingston took their Acorn Pocket Books home with them. Teachers reported improvement in writing, presentation skills, spelling and fine motor skills among the pupils in Years 8-11.

Primary schools in Wellington, Somerset piloted a similar scheme with more parent involvement.

Headteacher of Beech Grove Primary, Robin Griffin found that the home use of Pocket Books opened the door to a much wider educational discussion with parents. Most important was the fact that parents were able to see at first hand that children acquire skills in IT in a very different way to adults.

Commenting on the experience, Robin Griffin remarked: "I believe that in this respect especially, the project has strengthened home/school relationships in a context that, to many parents, some governors and all the staff involved, appeared problematical in the past."

Options

An educational rental scheme open to both the state and independent sectors. This is a highly practical approach which allows schools to buy the computer equipment they need by spreading the costs over three years, thus making the most of budgets. As schools can also update machines as their needs change during a rental period, it adds an extra degree of flexibility not usually available. Add to this consultancy, installation and hardware and software support, and this is a truly unique scheme.

THE HOME/

The family Frost

Roger is a teacher at Pewsey Vale Grant Maintained Comprehensive School in Wiltshire. As well as being IT coordinator he teaches Science, Technology and Business Studies. **"Fantastic! A real time saver! I hate bits of paper and I was impressed with how easily I could use this device to store information. I used short audio recordings as reminders and found the word processor a great way to keep notes."**

Sue is also a teacher at Southbroom Junior School in Devizes. She is the Special Needs Coordinator and a language development specialist. **"Versatile, portable and powerful, with a clear screen and good compatibility with our existing systems."**

Megan (aged 13) is a Year 9 student at Lavington Grant Maintained Comprehensive School in Wiltshire. **"It was great. I loved playing with the Pocket Book – particularly recording sounds and playing them back. I thought the word program with the spell check was useful too."**

Simon (aged 17) attends Clarendon Comprehensive School in Trowbridge and is studying geography, mathematics and history. **"I'm taking geography as one of my A levels. This involves a lot of field work. I found the ability to store data and produce field notes very useful. It was easy to transfer my data on to our A3000 computer."**

WE all know that Acorn desktop computers, with their attendant software, are superb for all sorts of purposes, including education. Their disadvantage, which they share with all standard computers, is that they are bulky and require a good supply of mains electricity. Carrying a Risc PC or even an A3020 from home to work is not very convenient and is likely to result in a period off work with a bad back from carting the stuff around. It could result in damage to the delicate moving parts of the system, notably the disc drives, as they get battered around in the back of a car. All in all, desktop computers are best left in place, on the desktop.

Acorn has solved these problems by redesigning its palmtop computer, now known as the Pocket Book II. This little beast, when folded, is a mere 165mm x 85mm x 20mm. If dimensions don't convey too much to you, then that really is small enough to fit in an ordinary trouser pocket. Pocket Book II is powered by a couple of AA batteries. My review computer has run on batteries for 14 hours 36 minutes – it keeps a record – and still tells me that there is plenty of life in them. The Acorn Pocket Book II is very cheap to run and a mains transformer is available, so battery life could be preserved even more.

This computer may be small but it is fully functional. The LCD screen provides a sharp and clear image and text displays may be zoomed in or out to suit your eyes. Even using 16 rows of text, with 80 letters in each row, I can see and read the display with no difficulty. The screen refresh is fast, even using graphics.

But how does the Pocket Book II stand up to the rigours of school and home usage?

At school...

I have limited time to access unfamiliar systems and the Pocket Book II is not a RISC OS machine but is still very intuitive to use. There are 10 built-in applications: Write, Schedule, Abacus, World, Cards, Calculator, Time, Spell, Record and Plotter, plus a printer driver. All the programs are a doddle to run using a system of drop-down menus which are activated by hitting the menu key. If things really baffle you, try the Help key. However, neither I – nor my team of young users – had any need for help.

My Pocket Book II arrived and was put to work straight away. My first tester had no difficulty coping with the word processor and rapidly got to grips with the spell checker. When he

*The Frost Family put the
Pocket Book II through its
paces at school and at home*

SCHOOL *link*

had finished his task the crucial moment came. Would we be able to send his text along to a desktop Acorn for improving the layout, fonts and printing?

Acorn has provided a device called an A-Link for this. It connects the Pocket Book II to the serial port on the main computer. A piece of software for the desktop, PocketFS, completes the requirements. I have to confess to some difficulty getting things going but after a bit of trial and error selecting various baud rates, we had the two machines talking. Versions of this link are also available for the PC and Mac.

Transfer is then very easy. The Pocket Book looks just like another disc drive on the main computer. Files can be dragged from one drive to another or straight on to an application. Files from the word processor are stripped of any layout detail and copied as plain text and files from the database or spreadsheet are recognised as CSV or even TSV files.

It is possible to transfer other pieces of saved work as well. I tried to transfer sound samples for use in Tracker programs. It all worked, but the sounds ended up very *dirty*. Data, of all types, can be transferred in the opposite direction as well.

This ease of transfer makes the Pocket Book II the ideal companion for school pupils as well as teachers. My well-travelled machine has been on a school trip to Bristol Zoo where some pupils were able to write up their notes ready for transfer to the computers back at school. This certainly helped the youngsters achieve more from the trip. They already had a first draft of their ideas and were able to spend time improving the quality of their work.

At home...

Bringing the machine home in the evenings and weekends, the family spent little time getting to grips with the word processor, which allowed the usual styles to be added to the text and integrated well with the spell checker. The record card style database is ideal for addresses and phone numbers and it even has an in-built autodial facility.

The almanac or diary program, Schedule, allows a variety of views from daily right through to a whole year at a time. The ability to attach audio alarms to appointments is certainly a bonus. The companion program, Time, can also be used for reminders,

particularly for events which occur more than once, and worked well with our family's busy schedule, while anyone used to spreadsheets will find Abacus a delight to use.

Record is a sound sampling program which intrigued my children immediately. The computer has an in-built microphone, and samples up to 20 seconds long (depending on disc space) can be recorded. These samples can be used as the audio alarms used by Schedule and Time. I discovered this early on a

Saturday morning when the voice of my son's friend disturbed me with *Wakey Wakey*.

Pocket Book II also has a built-in Basic programming language. I have to confess that I have not explored this at all. I have only found one group of people who don't like Pocket Book II – these are trained touch typists who find the keyboard too small and fiddly.

All other people, teachers or pupils, will find this little computer a necessity for work or play after a very short time. My immediate problem is that I have to send my Pocket Book II back. I don't know how we're going to cope!

Conclusions

Any pupil who owns one of these machines is at a real advantage across the age ranges and the curriculum. They are small enough to be easy to carry and use and tasks can be prepared in advance of a lesson and improved under the helpful guidance of a teacher. While the

Write program would probably have most uses, the database and spreadsheet are also very functional. The spell check, which allows various fuzzy searches could also be very useful.

Disorganised pupils will find this little computer very convenient, particularly with supportive parents. They will have the ability to store short notes in audio form, instructions for homework can be downloaded onto the machine, and students can set their own alarms for deadlines.

WHAT'S ON

Acorn

Creche

Fully trained and qualified Nursery Nurses will entertain any child – aged between 0 and 12 – free of charge for up to two hours while you visit the show, examine the latest technology or try your arm at one of the many challenges and competitions at Acorn World '94.

Jugglers, face painters and a jester

Throughout the show you'll come across entertainers to turn you into master jugglers or transform your features, and teach you new tricks.

Competitions

Pocket Book Jigsaw: You can pick up your entry card from points around the show. This shows a picture of a Pocket Book II which has been divided into 12 jigsaw pieces. To win a Pocket Book II you must find these 12 pieces which are dotted around the show. Drop off your completed card – don't forget your name and address – at the *Acorn User* or *Acorn Computing* stands.

There will be two winners each day – one in the morning and one in the afternoon – so listen out for the announcements and you could win your very own palmtop computer.

Christmas Card Design Competition: There will be a display of the finalists' entries on the Acorn stand and the winning design will hold pride of place, with the prize of a Risc PC being presented at the show.

Lucky Dip: Sponsored by *Acorn Computing* and *Acorn User*, every one is a winner in this competition. All you have to do is delve into a tub and find a card. On each card are the details of a prize: it could be an A4000, or one of a host of top quality software packages, a bundle of disks or a T-shirt. What have you got to lose? Entry is 20p a go with all proceeds going to St Thomas' Hospital, London.

Registration Competition: You could even win a prize when you complete your registration card. Complete it as you arrive and pop it into the collection box. Winners will be announced throughout the day and you could win the latest edition to the Acorn range – your very own Pocket Book II.

Multiple Choice Quiz: How much do you know about Acorn products and technology? This is also a good time to find out what the Acorn Enthusiasts' Scheme could offer you, with opportunities to win an ARM 700 processor card or be one of the first to own a 486 card for a Risc PC in a competition of questions and a tie breaker, with extra prizes of a range of Risc

PC processors and multiprocessor adapter boards. Full details from the Acorn stand.

Special Offers and Schemes

The Acorn sales and training stand is in place to give you all the details. There's a bargain basement too.

Games Arcade

A spaceship has crash landed in the Wembley Exhibition Hall, and contained within it are 18 machines playing the very latest in arcade, puzzle and adventure action. Sponsored by Acorn Computing and Acorn User, this is your chance to

meet the Games Editors from the two magazines and see their classic collections of games in a world of laser light, sound and excitement.

Play is free and games will be alternated throughout the weekend giving you access to: StarFighter 3000, E-Type II, Sim City 2000, Wolfenstein 3D, Flashback, Magic Pockets, Heimdall, Spobbleoid, Lemmings II, Crystal Maze, Haunted House, Dungeon, Sensible Soccer, Virtual Golf, Xenon II, Magnetoids, Bowladroids, Cannon Fodder, Zool,

Stunt Racer 2000, Diggers, Elite, Saloon Cars Deluxe, Carnage Inc, Hamsters, Spheres of Chaos, Wavelength, Speedball II, Burn 'Out, Gods, Arcturus, Axis, Small, Warlocks, Pandora's Box, Time Machine, Cataclysm, Chocks Away, Zarch, Aldebaran and Interdictor II.

Theatre

Do you want to know what is happening in the Acorn world? Then the theatre is the place to be with informative and in-depth talks and discussions on a wide range of topics. See page 26 for a full list of what is on offer.

Publishing

Acorn will be demonstrating their professional publishing system used increasingly in the publishing and pre-press world. As well

AT

World '94

as watching the production of colour leaflets, you can see all stages of creation, from layouts to the state-of-the-art technology used today to produce plates and a final print.

Enthusiasts' Scheme

On the Acorn stand will be a section devoted to the Acorn Enthusiast – Clan Acorn '94. This is a special scheme which has been developed just for Enthusiasts and if you sign up, and part with £15, you'll be given a badge, sweatshirt, mousemat, and a disk of useful programs. You'll also receive regular mailings of information and offers directly from Acorn.

Kodak Photo CD

Working with Kodak, the Acorn in Education Centres (AECs) in the UK and the Cambridge Digital Imaging Centre, Acorn now offers professional PhotoCD creation and technical support at a discounted price to educational users – a typical transfer of a negative to PhotoCD costing around 55p. The promotion is backed by countrywide training courses and you can see the techniques used in preparing resource materials and multimedia applications at the show.

Technical Clinic

Have you got a question, query or poser? Then Acorn's very own technical experts are on hand to give you the answers.

Laser Labyrinth

Your vital signs are connected to a computer, you are carrying a high powered laser rifle and before you is a maze of opponents and challenges – how will your adrenalin react?

Free Training

Acorn Training will be running a series of hands-on training sessions. Each will be an hour long and consist of a mini training course which is a *snapshot* of the usual two-day

equivalent: Introducing RISC OS; Make the most of Draw and Paint; Effective DTP; Creative Multimedia and Behind the Desktop. Sessions will be run on a Risc PC, but are limited to six participants.

Home/School Link

Find out how the Pocket Book II is changing the way teachers and learners think about IT in the classroom, at home and in the world at large.

Set Top Boxes

You can glimpse the home of the future at Acorn World. Very much in evidence will be Online Media's STBs, capable of providing a powerful home/office multimedia environment as well as low-cost interactive TV services such as video-on-demand, home shopping and banking.

Audio Visual Gallery

New this year is a completely sealed AV unit where Acorn are offering you a glimpse of the future. In this world, movies are played on a domestic CD player, the entire AV experience is controlled by a sophisticated computer and you, as a user, are entirely in control of the system from the comfort of your armchair.

Risc PC Power

The focus of the main Acorn stand is leading edge technology. As well as a 7-slice Risc PC powered with a range of the unusual, interesting and useful, Acorn's own developers will be there to talk to you about what they are working on for the future.

Special topics to be covered will include ATM technology (synchronous transfer of data), video-conferencing, MPEG support and a machine demonstration of several applications running simultaneously, which most Acorn users will perceive as separate tasks. Add to this networking, operating systems and heterogeneous/homogenous processing and this promises to be one of the busiest stands at the show.

Make your way to the **Acorn Computing** stand and you'll find...

Special Acorn World '94 subscription offer

Only £9.49 per quarter – over a year you receive 13 issues

Have Acorn Computing delivered postage free to your home every month – guaranteed – and choose one of these excellent free gifts when you subscribe to Acorn Computing for a year for £37.99 or by continuous quarterly direct debit for **only £9.49**

Or:
Speech (utility)
Aldebaran
One extra issue
and a magazine
binder

December issue on sale here at the show - before it's in the shops!

Journey through the *Interactive Tunnel* and get *Expert Technical Advice* – FREE

This year's stand will give you a chance to experience the best of the past 12 years of Mike Cook's Body Building projects. Mike, one of our technical experts, produces projects that enable you to experiment with and build some hardware add-ons for Acorn Computers.

We've taken some of the best loved and fun projects and recreated them for you to try out for yourself, on the stand. It's time for hands on Mike Cook!

You might remember the Pulse Rate Monitor which takes an infrared reflection from your finger, or the Nine Pins reed switch game. You can use light dependent resistors to generate ever changing artwork, play at being a sneak thief getting treasure past an infrared beam, view stereoscopic 3D images, sort coins by size and value or explore Chaos theory in a dripping tap. Sounds good? See you at the stand then!

PLUS... There's the *Lucky Dip competition* on stand 54, where over 10,000 prizes will be given away. Every entry is a winner – instantly! Prizes range from mugs, to software, to computers. Entry costs just 20p for two dips – all the proceeds will go to charity; St Thomas' Hospital in London.

There's also the *Pocket Book II competition*. You'll find entry forms on our stand. All you have to do is note where the jigsaw pieces of a Pocket Book picture are scattered throughout the show – and you could win a Pocket Book of your own. There are six up for grabs; two each day. We'll announce the winners at midday and near the end of each day.

Covering all Acorn machines
Acorn
COMPUTING

Stand Guide

Stand 24 10 out of 10

1 Percy Street
Sheffield
S3 8AU
Tel: (01142) 780370

The big new 10 out of 10 release is the *Driving Test* package. This is the first real software users' guide to driving, with over 4,000 questions on – among other things – continental driving, trivia, motorsport, traffic signs, junctions and more. Also on show will be *Structured Spelling*, *Essential Maths* and *Maths Geometry*.

Stand 70 3SL Ltd

501 – 511 Crewe Road
Sandbach
Cheshire
CW11 0QX
Tel: (01270) 761516

3SL – trading since 1981, and approved to BS5750 standard, are the largest Acorn dealer specialising in education and networking. 3SL offers a range of services designed to meet your requirements. An Epson service centre, with a full range of Epson products and servicing.

Stand 72 4Mation

14 Castle Park Road
Barnstaple
Devon

EX32 8PA
Tel: (01271) 25353

On show will be our recently released interactive fiction software for younger users. Come along and see how *Betsi* (an adventure set in Tudor times) and *A Mouse in Holland* can inspire you. Special prices for the show!

Stand 24 4th Dimension

1 Percy Street
Sheffield
S3 8AU
Tel: (01142) 780370

The 4th Dimension will have a big new release, and the best special offer it's ever had. The game is *E-Type2* and is the game for the Risc PC. Split-screen action for two-players, tunnels, laser guns, lots of power ups and a built-in designer make this one to watch out for for fans of the original *E-Type*.

Stand 60 Academy TV

104 Kirkstall Road
Leeds
LS3 1JS
Tel: (01132) 461528

Academy TV will be displaying its range of CD-ROMs including: *Science 1: Elements*, *Science 2: Materials*, *Environment 1: Water*, *Environment 2: Land & Air*, *Inventors and Inventions*, *En Marcha!* and *Directions 2000*.

Kids' Column

4 page pull-out and keep section

Here is a series of puzzles and games for children of all ages

1

Can you spot the eight differences between these two pictures?

Spot the difference

Which silhouette exactly matches the picture of the elephant?

2

Shadow pictures

2.

Rosie and Jim is a Ragdoll Production for Central Television. These pictures are all taken from Sherston Software's latest release: Rosie and Jim Talking Activities - Duck loses his quack and Jim gets the sneezes. These are specifically intended for young early and non-readers, containing very simple activities aimed at this ability range

3

Farmyard

A collective noun is used when referring to a collection of animals. Can you help Rosie and Jim to match them up?

Gaggle
Flock
Herd
Swarm
Shoal
Hoot
Pride
Pod
Murder
Whales
Lions
Geese
Crows
Bees
Sheep
Owls
Cows
Herring

4

Riddle-me

My first is in **silicon** but not in **salt**
My second's in **horse** but not in **vault**
My third's in **Iceland** but not in **Greece**
My fourth's in **pleat** but not in **crease**
My fifth is in **secret** and also in **wish**
My whole is in **computers**
and comes with **fish**
What am I? _____

Geography quiz

5

The capital letter indicates the location of a town or city. Do you know which?

- Location A _____
- Location B _____
- Location C _____
- Location D _____
- Location E _____
- Location F _____
- Location G _____
- Location H _____
- Location I _____
- Location J _____

Manchester
London
Cardiff
Torbay
Aberdeen
Glasgow
Cambridge
Brighton
Birmingham

6

Path attack

Can you take Jim to Rosie without meeting the duck?

7

Missing piece

Can you find which two pieces are missing from the picture?

8

Word wheel

Fit the names of all the objects into the wheel so that they read clockwise. The last letter of one word is the first letter of the next.

9

Illuminated letters

If you want to change the colour, Convert to path

We are going to create a letter T with some ivy leaves around it, though you can make any letter with any design. Open Draw on your computer and turn off the gridlock as you don't have to be exact. Next select Create Line and draw a rough leaf shape with five points round the edge. Draw the stem separately.

Now we need to make the shape a bit more realistic by changing a line into a curve. Select the Edit option and click Adjust which will highlight the control points. Click Adjust on the control point at the end of the line you want to change to a curve and it will change colour. Click the Menu button and a new Edit Menu will appear — you can now *Change to curve*. Two extra control points will appear on the line allowing you to drag them (with Adjust) to produce the curve you need.

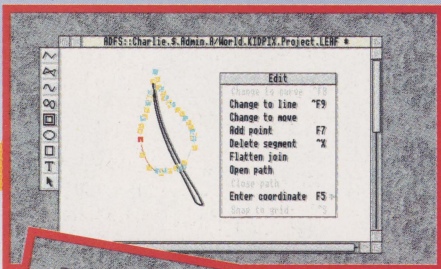

To see what the curves look like press Select to turn off the control points and display the outline. Continue around the leaf outline until all the lines are changed to curves. If your leaf looks too curved, insert extra control points by pressing Adjust on the control point after the line on which you want an extra one. Select the Add Point option. If this is looking too crowded choose the Zoom option.

Finally, increase the thickness of the leaf shape. Do the same with the stem and

Use the control points to make the leaf the shape you want

Time to add the swirls

When you are finished with your leaf and stem, move them into position

Happy with the colour, its time to construct your letter

Rotate the leaves for the best effect

then Select it and move it into position. Choose Select all from the Menu and Group the leaf and stem to make one object. You can add colour to your leaf with the Fill Colour option in the Style menu. Next, select the leaf and increase the line width via the Style menu — adjust the thickness to 1 point. Make seven of these by copying them. Remember to save.

Now we need to choose our letter. A letter the size of a small postage stamp would be about an inch high, so Select Create Text and go to the Style Menu — you can create a letter to the measurement you want. All choices are in points which relate directly to inches — 72 points being exactly one inch.

You can use any font you want, but we'll start with Trinity Bold, so select this from the Font Name option under the Text Style Menu. Why not change the colour to light blue and the line colour and thickness to 1 point dark blue? To do this you'll have to Select the letter and via the Style menu choose the Convert to Path option. This means that the text can no longer be edited though. Save your work so far.

Now we're going to drape the leaves over the letter. Draw a selection of swirls with a line thickness of 1 point and move these on to your letter T. If you want a swirl to go behind the letter, Select it and use the Back option from the Select Menu. Use zoom here to give you a better view.

You can now drag your leaves on to the swirls on the letter. You can make the leaves smaller by changing the size. To do this drag the bottom handle of the select box and rotate them using the top handle. You'll probably have to change the line width to 1/2 point too. Save your design as it progresses.

You can leave this as it is or add a box or oval. You can now print it out or put it into a letter, card or anything which will take a draw file.

Answers

- 1 Jostes ear-ring, Jims smile, Extra plate on back wall, Colour of pictures on right wall, Colour of vase, Height of chair in foreground, Bow in Jostes hair, Pipe on back wall
- 2 D
- 3 Swarm of Bees, Gaggle of Geese, Pride of Lions, Shoal of Herring, Flock of Sheep, Herd of Cows, Hoot of Owls, Murder of Crows, Pod of Whales
- 4 CHIPS
- 5 A - Manchester, B - Aberdeen, C - Glasgow, D - London, E - Birmingham, F - Torbay, G - Carlisle, H - Brighton, I - Cambridge, J - Cardiff
- 6 Sheep, Pepper, Raspberry, Yam, Man, Nose, Elephant, Teapot, Tree, Envelopes

Primary schools, and 'Publisher' fonts which come in a RISC OS font and a Type 1 font with identical encodings. Also on show will be a range of over 40 fonts, covering all the native alphabets of the former Soviet Union.

Stand 50 EPS Events

Barley House
Barley Close
Sibford Gower
Banbury
OX15 5RZ
Tel: (01295) 788386

EPS Events are Show Managers for Acorn World. Should you have any questions or ideas on improving any aspect of the show promotion or presentation they would be pleased to talk to you.

Stand 118 ExpLAN

Exeter
EX1 1TL
Tel: (01392) 437756

New releases include *PrimeMover*, the first real-time animator and *Map Importer* for importing Ordnance Survey digital map data. There will be many special offers on our popular range of software including *PrimeSolver*, *CADet*, *Keyboard Trainer*, *Ancestry* and *Linkword Languages*.

Stand 71 & 89

Nelson Multimedia

Nelson House
Mayfield Road
Walton on Thames
Surrey, KT12 5PL
Tel: (01932) 252497

Nelson Multimedia is a division of Thomas Nelson. Set up in September 1993 following acquisition of Interactive Learning Products it has already produced CD-ROM titles for secondary schools; science, humanities and many more.

Stand 42a

Neurotron Software

Birch Tree House
The Street
Petham
Canterbury
Kent
CT4 5QU
Tel: (01227) 700516

This year we will be selling and demonstrating version three of our powerful OCR software. New releases include a versatile multimedia database and a filer extension application. A new book teaching *PROLOG* (an Artificial Intelligence language) will also be available.

Stand 92

New Media

12 Oval Road
London, NW1 7DH
Tel: (0171) 916 9999

New Media will be demonstrating its award-winning multimedia programs

The Chemistry Set (an interactive library and encyclopedia of chemical information) and the *World of Number* series (designed to encourage the understanding of essential numerical concepts).

Stand 73 Northwest Semerc

1 Broadbent Road
Watersheddings
Oldham
OL1 4LB
Tel: 0161-627 4469

New from Semerc are Informatrix, a super high resolution overlay key-board, based on the popular concept universal 2010 model; *Informax*, the latest in overlay designer software for Informatrix, and Resound, the powerful new sound digitiser for the Acorn platform.

Stand 49 Norwich Computer Services

96a Vauxhall Street
Norwich
NR2 2SD
Tel: (01603) 766592

Meet the publishers of *Archive* – the Acorn user group magazine – for the latest news on the Risc PC and hardware/software developments. Come and talk to our technical experts. Free *Archive* mouse mat with every 12 month subscription.

Stand 24a Oak Solutions

Dial House
Chapel Street
Halton
Leeds
LS15 7RN
Tel: (01132) 326992

Oak Solutions will be demonstrating *Apollonius*, its revolutionary parametric CAD program that combines Olympian power with spartan simplicity. Also on display will be *Genesis* for multimedia authoring, *Rephorm* – the ultimate morpher, plus a range of CAD and curriculum applications.

Stand 52 Oregon Software Developments

36 Grosvenor Avenue
Streetly
Sutton Coldfield
B74 3PE
Tel: 0121-353 6044

A visit to the Oregon stand is essential for those with an interest in sound and graphics, where new versions of *PhotoTouch*, *Morpheus*, *Symphony* and *AppleFS* are on demonstration. Witness the launch of three exciting new leisure titles: *Burn Out*, *Sally & Wally* and *Arcturus*.

Stand 46 Pineapple Software

39 Brownlea Gardens
Seven Kings
Ilford
Essex
IG3 9NL
Tel: 0181-599 1476

Pineapple's acclaimed painting package, *Studio24*, will be on show, with the talented artist Walter Briggs demonstrating its use. The author of *Studio24* will also be available to explain some of the program's more esoteric features. In addition, Pineapple will be selling the latest virus protection systems, and a new schools administration application.

Stand 21 Porters Primary Software

138a Harvey Clough Road
Sheffield
S8 8PG
Tel: (01142) 582878

Porters Primary Software produces easy to use and affordable educational software. On show will be our popular *Infant Windows*, *Junior Windows*, *Primary Collection* and *Turtle*, and new packages *Protector* and *Sorter*. Our software contains something for all ages and abilities.

Stand 35 Powerslave Software

PO Box 175
Enfield
Middlesex
EN2 6RD

UK launch of the officially licensed Acorn conversion of the popular game *Wolfenstein 3D*. Special launch price at the show £25, or £30 by mail order.

Stand 123 Quantum Software

35 Pinewood Road
Deans
Livingston
Scotland
EH54 8NN
Tel: (01506) 411162

Quantum Software will be selling v3.06 of its best selling utility – *Keystroke*, the hugely popular 'Macro Making' application at a special show discount price. It is also showing for the first time *Blinds*, a sophisticated professional pinboard-type program that has user-definable multiple windows.

Stand 5 Quill Marketing

11 Hemmings Close
Norwich
NR5 9EH
Tel: (01603) 748003

Quill Marketing will be showing the largest range of textile transfer papers in Europe.

Stand 93 The Really Good Software Company

39 Carisbrooke Road
Harpenden
Herts
AL5 5QS
Tel: (01582) 761395

Launched at the show, *Softcrete* software protection utility will interest schools, software manufacturers, programmers and anyone wishing to limit unauthorised use or piracy of pro-

grams. Also being demonstrated: *Notes*, *Twilight*, *Z-Link II* and the popular *Picture Book*, *Money Matters*, *Target Maths* and *Dataword*.

Stands 53 & 96 The Resource Centre

51 High Street
Kegworth
Derby
DE74 2DA
Tel: (01509) 672222

On Stand 53: See the new Discovery 2000 Risc PC with specially-written software including *TalkWrite*, *ClockWork*, *EasiCalc* and *BigDesk*; and much more. Experience *Dragon Droom's Revenge*, the latest of Derek Allen's classic adventures. *EasiWriter* and *TechWriter* can also be seen on this stand.

At Stand 96: Educational software for home and school. Visit *Albert's House* for language work, logic and deduction. Splash into *Pond* for early number work. Call the *Supermarket* to learn about money. Try *TalkWrite* for word-processing from first words to local newsheet.

Stand 85 S J Research

J1 The Paddocks Ltd
347 Cherry Hinton Road
Cambridge
CB1 4DH
Tel: (01223) 416440

SJ Research is holding a network design help clinic on its stand this year. It also intends to demonstrate product development such as performance enhancements and using *Reply*, *Nexus* Discless-clusters and fast network printing using the Risc PC 486 card.

Stand 59 The Serial Port

Burcott Manor
Wells
Somerset
BA5 1NH
Tel: (01749) 670058

We will be showing the latest versions of our comms products: *Arcterm*, *ArcBBS*, the dual serial card and our modem bundles. There will also be a preview of a 3D design program for ray-tracing and rendering object/scene design.

Stand 63

Serious Statistical Software

Lynwood
Benty Heath Lane
Willaston
South Wirral, L64 1SD
Tel: 0151-327 4268

Our products *1st*, *1st/r* and *1stL* are the outstanding statistical packages for Acorn computers. We shall be demonstrating the latest versions. All have excellent graphics capabilities and robust interfaces to other numerical software.

Stand 42

Sherston Software

Angel House
Sherston
Malmesbury
Wiltshire, SN16 0LH
Tel: (01666) 840433

Leading educational publisher Sherston Software will demonstrate some inspiring new releases including *Rosie and Jim* talking activity programs and *Oxford Reading Tree* talking stories. Visitors to Acorn World will have the opportunity to tackle its highly acclaimed *Crystal Maze* computer program.

Stand 27

Sibelius Software

4 Bailey Mews
Auckland
Cambridge, CB5 8DR
Tel: (01223) 302765

Sibelius Software will be launching the new version 2.5 of *Sibelius 6* and 7, which include not only Risc PC enhancements but also some highly sophisticated playback features, such as automatic interpretation of dynamics, tempo marks and other text in English, French and Italian.

Stand 22

Simtec Electronics

Avondale Drive
Tarleton
Preston, PR4 6AX
(01772) 812863

A complete range of memory upgrades for Acorn computers, always

in stock. As all our products are designed and manufactured in house, we are able to utilise the latest technology to produce upgrades of the highest quality with unsurpassed reliability.

Stand 120

Smart DTP

36 Park Road
Duffield
Belper
Derbyshire
DE56 4GR
Tel: (01332) 842803

Our stand will include our entire range of DTP products and will feature several exciting new products. We'll be demonstrating our flagship package, *PublishArt*. Also, brought to you exclusively by Smart DTP, Fednet's latest brainstorm *Star Fighter 3000*.

Stand 29

Snap Computer Supplies

Unit 12, The Sidings
Hound Road
Netley Abbey
Southampton, SO31 5QA
Tel: (01703) 457111

Snap will have its full range of consumables and accessories at Acorn World '94. All products will be at special prices.

Stand 44

SpaceTech

21 West Woods
Portland
Dorset, DT5 2EA
Tel: (01305) 822753

Along with its range of space and graphics applications, including its weather satellite stations, Spacetechn is showing the latest version of the studio quality professional artwork application *PhotoDesk*. The version demonstrated includes many new features not shown before.

Stand 16

Supreme Software Systems

21 Courtenay Close
Chapel Break

Bowthorpe
Norwich
Norfolk
NR5 9LB
Tel: (01603) 795077

Demonstrating the *Archiboard* network communication system, a cost-effective solution to network communications. Released at the show is the *Archiboard* Internet access package. Also available are demos of other products, to be fully released later this year.

Stand 14

System Insight

Units 1-3 East Burrowfield
Welwyn Garden City
Herts
AL7 4TB
Tel: (01707) 395500

System Insight is the inkjet specialist, and we will be exhibiting our full range on renowned *Inkman* ink refill kits. We will also provide a wide variety of original cartridges alongside specialist media. We cater for all your inkjet needs.

Stand 51

TBA Software

Mead Farm
North Road
Tisbury
Bath Avon
BA3 1JH

TBA has five games to release at the show: its flagship release *Formula Two Thousand*, *Acceptable Rate of Loss*, *Cyber Ape*, *Warp Riders* and *MERP*. It will also be selling four varieties of joy-pads ranging from £15 to £30, and will have demos of future releases and special offers.

Stand 38

TMJ Computer Software

39a Station Road
Desborough
Northants
NN14 2RL
Tel: (01536) 762713

A fast, friendly, family run mail order and retailer, specialising in Acorn computers, peripherals and software. Educational and home orders welcome. No order too big or too small. Existing customers do come and say hello.

Stand 72d

Uniqueway

42 Crwys Road
Cardiff
CF4 4NN
Tel: (01222) 644611

Version II of *Empire*, the Acorn Replay movie editor, will be on show at the Uniqueway stand. Uniqueway will also be launching a low cost SCSI CD-ROM for the Risc PC and offering a CD-ROM cutting service. Finally, it will also be selling the RISC Disc CD-ROM, which aims to show off the capabilities of the Risc PC.

Stand 40

VTI

Albany House
Oving Road
Chichester
West Sussex
PO19 4BH
Tel: (01243) 531194

Formerly Vertical Twist, this company will be showing a new version of its printer port sampler with *Sonor* software, CD-ROM and hard drive systems and the VTX2000 music card. Eclipse will also be on the stand with all its games including *Dune II*, the Power Pads and *James Pond II*.

Stand 63

Warm Silence Software

St Catherine's College
Manor Road
Oxford
OX1 3UJ
Tel: (01585) 487642

Warm Silence Software will be demonstrating a new version of the *Larger* pinboard replacement software and, a show exclusive, selling Paul Gardener's AVI movie player. Plus *Adventure Pack 1*, a set of games for the Pocket Book.

Advantage

The Acorn Advantage now stretches far **beyond** computers...

ADVANTAGE TO THE SCHOOL

As an Advantage member your school will benefit from extra equipment

- Every time a registered school purchases Acorn hardware the school will be awarded Advantage points.
- These points can be collected and redeemed against a broad range of practical, school related equipment contained in the Advantage portfolio.

ADVANTAGE TO THE TEACHER

As an Advantage member you will benefit from:

- Discounts on conferences, exhibitions and seminars.
- Specially commissioned reports on major issues facing education and IT.
- Attractive training offers.
- Complimentary subscription to the highly acclaimed Arc.
- Plus much, much more...

Technical Question Time

CLOSED

THE ULTIM

If you want to see what unlimited money and imagination can produce, then Acorn's Risc PC development team are the people to see. We gave them a top-of-the-range 7-slice Risc PC with 21in monitor and told them to fill it. You can try out the results for yourselves on the Acorn stand. Should you have the money then you could actually buy all the items which are mentioned by the end of the year – start saving.

However, there is a serious side to this exercise. One of the purported strengths of the Risc PC is its expandability and flexibility to meet your needs today and in the future. By stretching the limits of the system you can see the truth of this and that reliability and speed are unaffected.

Did you know

- Acorn Econet was first designed for the Atom on the back of a napkin in a Beefeater Restaurant in 1980.
- Acorn personnel (Chris Turner and Steve Furber) also designed the chief rival to the Acorn System One – the Science of Cambridge MK14.
- Acorn was first called the Cambridge Processor Unit.
- Acorn's first contract was to build electronic microprocessor controlled Fruit Machines for Ace Coin Equipment. Steve Furber wrote the software while Roger Wilson designed the circuits to detect attempts to confuse the logic with Piezo electric lighters, which generate a lot of interference.
- The internal code name for the Acorn System One was Hawk.

Slice One

- 50MHz ARM 710
- 192Mb DRAM
- 64Mb SIMM
- 128Mb Custom Board
- 16-bit ESP sound card
- 10 Base T Ethernet card
- 4Mb VRAM interleaved
- 420Mb IDE Conner hard disc
- 80MHz DX2 Blue Lightning Risc PC 486 card
- 103 Watt power supply

Slice Two

- 8Gb DAT HP tape streamer
- 1.6Mb floppy disc
- 2 x Cumana 32-bit SCSI II cards

Slice Three

- Pioneer Quad Speed CD-ROM drive
- 420Mb IDE Conner hard disc
- Eagle M3 Multimedia card
- TV Tuner
- Teletext Card
- 103 Watt power supply

Slice Four

- Pioneer Quad Speed CD-ROM drive
- 21Mb Floptical drive
- 2 x Irlam 24i16 cards

Risc PC 600

ATE

...we gave Peter Bondar
a blank cheque and told
him to spend, spend, spend

Risc PC system

Slice Five

- Pioneer Quad Speed CD-ROM drive
- 230Mb MO SCSI Fujitsu hard disc
- PC ISA Adapter card
- 103 Watt power supply

Slice Six

- 9.1Gb IBM SCSI Micropils hard disc drive
- 2Gb DEC SCSI disc drive

Slice Seven

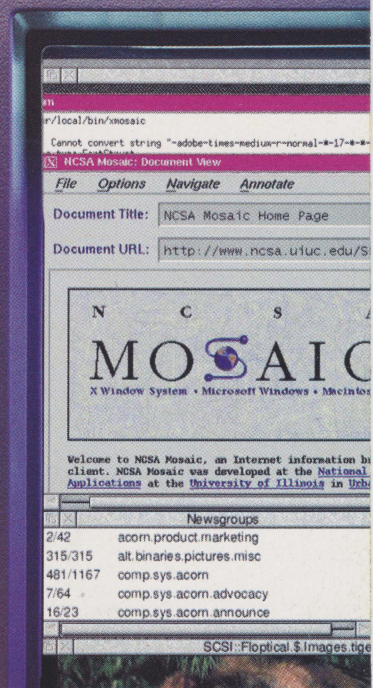

- PC ISA combination graphics cards
- Morphy Richards Toaster with automatic browning control - ideal for when you can't take a break

Did you know

● How many power supply pins does an ARM chip need? None, while measuring the power consumption of the very first ARM2 chips the meter in the power supply lead became disconnected. Much to everyone's surprise the sudden removal of power to the CPU did NOT cause it to stop working. It seems that the processor required so little power it could be kept running (just) on the current leaking through the signal inputs. For the technically minded, the substrate is supplied by current flowing through the input pin static protection diodes.

Stop Press

The development team have surpassed themselves. So rather than one 7-slice Risc PC you can see two - one a personal filer and the other a client server with even more goodies inside.

Come to the

Acorn **COMPUTING**

**EVERYBODY
WELCOME**

OPEN DAY

SUNDAY DECEMBER 4th - MANCHESTER

Make your way to one of the few Acorn-specific events to take place in the north. See the latest products from many different companies, chat to our experts, buy Acorn hardware, software and peripherals at the best prices and of course meet the Acorn Computing team.

See the latest Acorn developments for yourself

Find out everything you've been wanting to know, and more, about all the latest Acorn equipment, from hardware and software to accessories and peripherals. Speak to experts from a whole range of companies and, of course, **Acorn Computing** magazine.

Your opportunity to buy all Acorn equipment

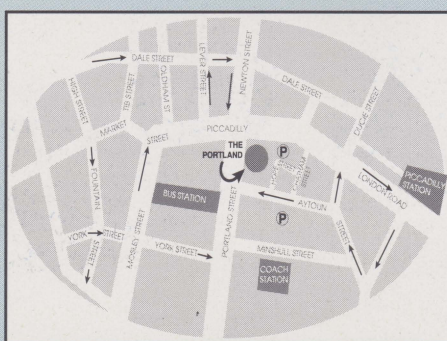

Not only can you gather all sorts of interesting information and the latest news, but you can actually buy products at competitive prices.

Meet the team behind the magazine

Acorn Computing will of course be there. Drop in to see us and

you can pick up all sorts of technical help and advice. We'll have our **latest, Christmas issue on sale and a special subscription offer**. You can **meet the editors**, maybe just to say hello, or to chat about the magazine.

All in all it'll be a great day out for everyone. Entrance is only £1 and under 12s get in free. See you there!

...Clan Acorn '94
brings you information
and an inside look at
Acorn technology

ACORN

enthusiasts

ACORN World '94 sees the introduction of a brilliant new initiative aimed at those interested in the inside story of Acorn and its technology. For a mere £15 you can take out a lifetime membership to the Acorn Enthusiasts' Scheme – Clan Acorn '94 – which gives you the inside track on Acorn developments.

Sign up at Acorn World '94

And you'll receive:

- An exclusive Clan T-shirt
- Risc PC enamel lapel pin
- Clan mousemat
- Enthusiasts' disc including Advanced Risc Machine's ARM Cookbook
- A folder of information about products and technologies being developed and researched by Acorn

PLUS

You'll get a limited edition Clan Acorn '94 Risc PC sweatshirt and have the chance to win one of THREE Acorn prototype boards for the Risc PC:

- Simtec multiprocessor board
- ARM 700 with FPA processor card
- High specification PC card

In addition Clan Acorn '94 members will find out about: The Taos operating system – Why is a portable micro-kernel causing so much interest? Multiprocessing with the Risc PC – Exclusive technical details of Simtec's multiprocessor board; CD-Rom for the Risc PC – Something to fill you spare 5.25in drive bay; ARM7x0 series of processors – Is an ARM710 or ARM700 the right processor for you? FPA II floating point; IX – Turn your Risc PC into an X terminal; Acorn networking – Discover how Access+ is redefining easy-to-use high performance networks; Communications – Email and Newsreaders from RISC OS; Interconnectivity – How one piece of network software enable RISC OS machines to talk to servers from Microsoft, Novell and Unix; Risc PC 16-bit sound upgrade – Take the sound output from the Risc PC to CD quality; Pocket Book II – The original Acorn Pocket Book now has a big brother. Find out what's changed and pop along to the Enthusiasts' seminars – The chance to get the technical details of the Risc PC from the designers.

Also not to be missed

The Enthusiasts' stand is also the place to get the low-down on the technology behind the Acorn World '94 Audio Visual Gallery as well as the place to examine Peter Bondar's super-expanded Risc PC Rocket Ship.

As a Clan Acorn '94 member you'll receive a membership card, offers from Acorn dealers, a newsletter containing up-to-the-minute information about technology, products and developments from Acorn

As a select group, Clan Acorn '94 members will be able to try out pre-production products, developments systems or beta releases.

Among the first offers to members will be the chance to have an Acorn credit card and an opportunity to come to CeBit with the Acorn team. For the latest news, Acorn is encouraging all its enthusiasts to connect to the Internet and join in the

discussions on comp.sys.acorn and watch the announcements on comp.sys.acorn.announce.

A new term and a Pocket Book II

As you start the new school term, full of optimism for the year ahead, whether you are a teacher, administrator or a student you will find the Pocket Book II an indispensable aid.

The Pocket Book range now includes two new products, both with:

- Larger screen
- Higher screen resolution
- Larger memory
- Larger range of pre-installed software

For more information and a free copy of the Pocket Book Research Report complete the coupon and send it to Online Services, Acorn Computers Limited, FREEPOST (NW5643), Enfield, Middlesex EN1 3BR or call us on FREEPHONE 0800 800 480.

Acorn 

DTP

in the real world

*Simon Woodward details
the impact made by Acorn
products on the small printing
and publishing industry*

THERE are around 17,000 printing organisations in the UK plus thousands of small publications. Most are small organisations of less than ten people who realise that computer-based publishing systems provide them with an opportunity to refine their production and increase their efficiency. Three years ago, Acorn Computers made the decision to address this market by providing a range of publishing systems offering considerable advantages over other products and platforms.

These systems are now based on the Risc PC 600 and at Acorn World '94 you can see the significant productivity gains they can deliver.

In the publishing area we have recreated the combined businesses of a small publisher and printer. Using the Risc PC 600 and the 32-bit RISC based Acorn publishing system, we can produce and print full colour materials on the AB Dick Ruby 3000 two-head colour press. This will allow you to examine the complete process and see what goes on in these businesses on a day-to-day basis.

Acorn has established strong links with AB Dick – the international press, pre-press and finishing product supplier. AB Dick is working with Acorn as its only supplier of digital pre-press products and sells complete publishing systems to its customers, under the name Graphtex. The systems are targeted, depending on configuration, at both full colour or monochrome and spot colour applications. This creation of a complete computer-based system avoids the complexity and confusion which has been traditional in this area.

No less important to Acorn is its relationship with the developers, whose products make-up or enhance the competitiveness of the complete publishing system. Many of these developers are at the show demonstrating new products and enhancements to existing software and hardware.

The scanning maze

During the past year one technical issue has cropped up again and again – scanning. On the face of it, scanning is a simple task of taking a piece of artwork and converting it into a form which enables it to be stored in computer memory and used through a variety of computer applications.

The majority of problems centre on the quantity of data created

by this form of image storage. It is only too easy to scan an image and create an enormous file which may: be too large for the computer to load into any application, take an age to print, use up large areas of disc storage space or produce vast amounts of PostScript for a PS printer or image-setter.

How do you make the most of the equipment you've got? Most of the solutions can be put down to forward planning. However, you do need to know something about how images are printed.

The first thing you need to understand is how half tones are built, which is on a raster-based printer or image-setting device. *Raster*, in this case, refers to devices that build up the printer page from a series of black dots typically at a resolution of 300, 600 or 1,200 dots per inch (dpi) if it is a laser printer.

A *halftone* is the name a printer uses when talking about black and white photographs or artwork in a newspaper, magazine or other printed documents. The halftone image is built up from a series of black dots which vary in size giving the impression of light and dark.

Imagine a matrix or halftone cell 10 units across by 10 units down. This produces a halftone cell of 100 units. As you can see from the diagram, depending on how many of the units of the

matrix are black the resulting halftone cell can represent 100 shades of black from 0 per cent black (white) to 100 per cent black (solid black). When reproducing a printed photograph, many thousands of these 100 unit halftone cells may make up the image and form the basis of the different levels of grey in the overall image.

In the case of a 600 dpi laser printer, the smallest matrix unit that the printer can reproduce is a single toner dot, 600 of which the printer can print to every inch. Such a printer could build no more than 60 halftone cells of the 10 by 10 size to each inch – 60 cells by 10 dots across each equals 600 dots per inch. So, if a 60 line per inch (lpi) halftone screen (60 halftone dots per inch) is used to reproduce a photograph, then the resultant image can contain up to a maximum of 100 levels of grey from white to black on a 600 dpi printer.

If the output resolution is effectively only 60 lpi (effective dpi), then there is no point in scanning at a resolution of greater than double this value, that is 120 dpi. On most printed matter in magazines, a typical halftone resolution is 150 lpi for either black and white or colour images. Therefore, in this case the scan resolution need be no greater than 300 dpi.

This rule only changes when the image being scanned is not being reproduced at its original size. The effect on scan resolution of scaling up the image from the original size is to pro rata increase the scan resolution, or decrease should you be scaling down. For instance, if you are aiming to reproduce a photograph twice the size of the original, the scan resolution should be doubled. This is typically the reason for using higher resolutions on common scanners.

The colour depth of the scan should always be 8-bit (256 greys) for a black and white image and 24-bit (16.7 million colours) for colour images. Here are a few simple guidelines:

- Full professional level black and white printed images utilise no more than 256 grey levels
- Images, like landscapes, which contain many fast transitions from dark to light require few levels of grey to be realistic. As little as 60 greys may produce a very acceptable result.
- Images containing subtle transitions from dark to light – photos of machinery, furniture, skin tones and so on – require the maximum number of greys possible on any given output device, up to a maximum of 256 greys. Unless an image-setter is being used offering a resolution of at least 2000 dpi, there will always

be a trade off between halftone line resolution and the number of greys:

$$NG = \left(\frac{PR}{LPI} \right)^2 \quad \text{or} \quad LPI = \frac{PR}{\sqrt{NG}}$$

Where: NG = Number of greys
PR = Printer resolution
LPI = Halftone lines per inch

When dealing with a full colour image, the same rules apply except that we are then dealing effectively with 256 levels on each of the four primary printing colours – Cyan, Magenta, Yellow and Key (Black) most normally referred to as CMYK.

Application

A good discipline, for those new to scanning, is to set yourself a series of questions to resolve what resolution to scan at as a maximum:

1. How many greys do we need in our final image (size of halftone cell) to see a pleasing result? *Number of greys*
 2. Up to what resolution is the output device (printer or image setter) capable of working? *Printer resolution*
Calculate the required halftone screen resolution in lines per inch. Double this number to get a base scanning resolution.
 3. At what physical size will the image be reproduced?
 4. What is the physical size of the original which is to be scanned?
- Modify the base resolution by the ratio of original size (answer to 4) to reproduced size (answer to 3). The result will be the resolution at which you should set the scanner when carrying out the final scan.*

To demystify all this, come to the Acorn Professional Publishing exhibit, where the Technical Support Group can answer your questions. Also why not attend the DTP-related discussions in the Theatre.

Come

**Get your
December
issue before
it's on sale
in the
shops!**

Expert technical
advice from the
editors is available
throughout each
day – totally free!

**Enter the
Acorn User
Games
Challenge**

Flashback and *Scrabble* competitions will take place in hourly sessions throughout each day. The three best scores each session will receive a copy of the game they have played – on the spot.

Plus – there's also a prize at the end of each day for the overall highest score for each game. The winners will be announced after the last session each day and can take their prizes away with them.

**See Acorn User produced
on an Acorn machine**

Watch the best-selling Acorn magazine in the world designed and produced on an Acorn machine by our editors.

Plus...

The Lucky Dip competition

There are over 10,000 prizes to be given away on stand 54. Every entry is a winner – instantly! Prizes range from mugs, to software, to computers. Entry costs just 20p for two dips – all the proceeds will go to charity; Guy's Hospital & St Thomas' hospital trust in London.

Pocket Book II competition

Entry forms are on our stand. All you have to do is note where the jigsaw pieces of a Pocket Book picture are scattered throughout the show – and you could win one of your own – there are six up for grabs; two each day. We'll announce the winners at midday and near the end of each day.
